Subject: In Opposition to CONSTRUCTION OF A 1,200 MW HVDC TRANSMISSION

Please say NO to CMP power line. My family owns the cabins at Spencer rips on the Moose River where we have spent countless weeks hunting and fishing since my grandfather purchased the cabins in 1953.

The beauty of this pristine land needs to be protected and preserved for all of the future generations to come. This project will have a negative impact on the forest, rivers, lakes, and mountain streams, which as result will destroy native brook trout habitat.

I look into the eyes of my grandchildren and I pray they can walk in the same beauty that I have. That they can witness the same red and purple sunsets, listen to the Loon and the Kingfisher laughing as he darts along the river, and inhale the sweet aroma of our undisturbed forests.

Environmental experts give us 12 years to reduce our economic footprint or we are to face catastrophic consequences. This power line is a giant leap in the wrong direction!!!!

Please let us do the right thing for all generations to come.
