IS YOUR ESTABLISHMENT A PUBLIC WATER SYSTEM?

A public water system is defined as any publicly or privately-owned system of pipes or other constructed conveyances, structures and facilities through which water is obtained for or sold, furnished or distributed to the public for human consumption, if such system has at least 15 service connections or serves at least 25 individuals daily at least 60 days out of the year or bottles water for sale. The term "public water system" shall include any collection, treatment, storage or distribution pipes or other contstructed conveyances, structures or facilities under the control of the supplier of water and used primarily in connection with such a system, and any collection or pretreatment storage facilities not under that control that are used primarily in connection with such a system. (From the State of Maine Rules Relating to Drinking Water)

This definition means that if you serve water from your own source (well or surface intake) to 25 or more people per day, or have 15 or more service connections, and operate for 60 or more days per year, you are operating a public water system. There are three types of public water systems and each is regulated differently. The three types are:

Community Public Water System:

A public water system which serves at least fifteen service connections used by year-round residents or regularly serves at least 25 year-round residents. (Year- round is defined as permanent residence greater than six months.) Examples include water utilities, mobile home parks, apartment buildings, nursing homes.

Non-Transient, Non-Community Public Water System:

A non-community public water system that serves at least 25 of the same persons for six months or more per year. Examples include schools, office buildings, factories.

Transient Public Water System:

A non-community public water system that serves at least 25 persons, but not necessarily the same persons, for at least 60 days per year. Examples include restaurants, camps and campgrounds, motels and hotels, and bottled water companies.

"New Well" is defined as a well that has not been drilled yet or an existing well that has not been regulated as a public water source in the last five (5) years... new to the Maine Drinking Water Program (this includes After the Fact wells).

If you are planning a new well for a new or existing **Community** public water system serving 250 or more people, the materials you need for well and system approval are within this application, or referred to in this application. If you are planning a well for a transient or a non-transient, non-community system, please request the appropriate packet from the Drinking Water Program or see the DWP website: www.medwp.com

Please contact the Drinking Water Program at (207)-287-2070 if you have any questions concerning the process for reviewing an application for a new well or a new public water system. Compliance of the entire public water system will be evaluated during a comprehensive inspection by the Drinking Water Program.

GETTING APPROVAL FOR A COMMUNITY PUBLIC WATER SYSTEM OR WELL SERVING 250 OR MORE PEOPLE

If you own or operate a public water system in Maine, or are planning to establish one, drilling and utilizing a new well for serving water to the public requires written approval from the Maine Drinking Water Program (DWP) in the Department of Health and Human Services. This application has the material you need to complete this process.

Every public water system has a primary point of contact with the Maine Drinking Water Program:

PWS Inspector... responsible for helping you to complete the new well and system
approval process, all aspects of inspecting your public water system, and for evaluating
water quality and overall compliance of your public water system with the Maine Rules
Relating to Drinking Water. Your PWS Inspector contact information is on the front cover
of this publication.

STEPS OF THE NEW WELL AND SYSTEM APPROVAL PROCESS

- 1. Fill in the "Facility Information and Points of Contact" form.
- **2.** Fill in the "Request for Preliminary Well/System Approval" form. Note that public water system wells must be 300 feet from leachfields and 1000 feet from underground storage tanks. See setback waiver policies at www.medwp.com.
- **3.** Fill in the "Potential Sources of Contamination" form.
- **4.** Calculate the wellhead protection area (WHPA) and submit a "Site Plan for Preliminary Approval of the Proposed Well". Instructions and a sample site plan are provided in this packet.

<u>Send items 1-4 to your PWS Inspector</u>, identified on the front cover of this publication.

- **5.** Complete the application process for a General Operations Permit (contact information is enclosed).
- **6.** After Preliminary Approval has been granted by the PWS Inspector, the well can then be drilled. (For a system with an existing well, after preliminary approval is granted, proceed to the next step)
- **7.** Work with the PWS Inspector to arrange the necessary water quality tests to be collected.
- **8.** Fill in the "Request for Final Well/System Approval" form.
- $oldsymbol{9}_ullet$ Fill in the "Water System Component Checklist and Questionnaire".

Send items 8-9 to your PWS Inspector.

Note: If your public water system is already in operation serving water to the public, complete items 1 through 9 and send all materials to your PWS Inspector.

10. After final system or well approval is granted, contact the PWS Inspector when water is being served to the public from this new well or new public water system.

CALCULATING THE WELLHEAD PROTECTION AREA (WHPA)

The WHPA is a circle whose radius is determined based on the population to be served or gallons of water per day to be used by the water system. Use the table or graph below to determine the WHPA for your well. For example, from Table 1, a well to serve a water system of 750 people would have a WHPA with a radius of 1,470 feet. [NOTE: After conducting a pump test on the well, this WHPA may be replaced by a more realistic one based on the hydrogeology of the site.]

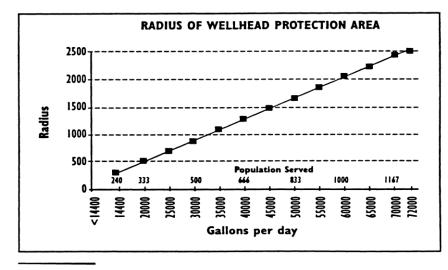

Table 1. Size of Wellhead Protection Area VOLUME GPD **POPULATION** Served Feet <14,400 <240 300 300 14,400 240 20,000 333 510 25,000 416 710 900 30,000 500 35,000 583 1090 1,280 40,000 666 45,000 750 1,470 50,000 833 1,660 55,000 916 1.850 60,000 1000 2,040 65,000 1083 2,230

2,500

70,000

72,000

Next prepare a map of the well site which shows the well site, the WHPA, and identifies any potential contamination sources in the WHPA. A sample site plan is shown below to assist you in preparing a plan of your property.

EXAMPLE OF A SITE PLAN FOR PRELIMINARY APPROVAL OF PROPOSED WELL

An acceptable site plan must include:

- A scale (1inch = 100 feet or larger);
- Potential sources of contamination within 300 feet (leach field, fuel tank, etc.);
- Underground Storage Tanks within 1000 feet of the well.
- Property boundaries;
- A description of land uses on adjacent properties;
- The general slope of land near the well; and

PUBLIC WATER SYSTEM GENERAL OPERATIONS PERMIT APPLICATION PROCESS

All Community and Non-Transient, Non-Community Public Water Systems which begin operations after October 1, 1999 are required to obtain a General Operations Permit before serving water to the public to demonstrate that they possess technical, managerial, and financial capacity sufficient to operate their water systems on a sustained basis in compliance with applicable state and federal requirements. To apply for a General Operations Permit, please contact the PWS Inspector identified on the front page of this application.

LICENSED OPERATOR REQUIREMENTS

A "Community" public water system (PWS) must be operated by a licensed water operator. The complexity of the treatment system and the number of people served by the distribution system determines the license classifications required by the operator. Your PWS Inspector will use The Maine Rules Relating to the Licensure of Water System Operators to determine the license classifications required by your water system.

The licensed water operator for your water system must have a current Maine water operator's license that meets the requirements of your specific water system. Licensed contract operators are available for hire throughout the State. You may also choose to become your own operator by obtaining the necessary license(s). The Drinking Water Program has study materials available, while other entities provide training on becoming a licensed water operator. Please contact your PWS inspector or call the Maine Drinking Water Program at 287-2070 to discuss the options available to you for providing or becoming a licensed operator for your water system.

COMMUNITY PUBLIC WATER SYSTEM APPROVAL PROCEDURE FOR A NEW SYSTEM OR WELL WATER QUALITY TESTING REQUIRED FOR FINAL APPROVAL

Community public water systems serve water to people in their homes. Examples include water districts, water departments, mobile home parks, and nursing homes. Final approval of a well for a community water system requires satisfactory results for:

Bacteria ("Test G" at State Health Lab): Indicates whether coliform bacteria are present in the water. If total coliforms are detected, the sample is also analyzed for *E. coli*.

Nitrate/nitrite ("Test NN" at State Health Lab): A test for nitrate and nitrite.

Inorganic Parameters ("Test E6" at State Health Lab): A good indicator of general groundwater quality includes: chloride, hardness, fluoride, copper, iron, manganese, zinc, arsenic, barium, cadmium, chromium, lead, mercury, silver, selenium, sodium, color, turbidity, pH, nickel, antimony, beryllium, sulfate, uranium, and thallium.

Cyanide ("Test Cyanide" at State Health Lab): A test for cyanide.

Volatile Organic Compounds ("Test VOC 524" at State Health Lab): A screening procedure which can detect the presence of more than 50 different hydrocarbon compounds including gasoline, kerosene, Methyl Tertiary Butyl Ether (MTBE), and many industrial solvents.

Radon in Water ("Test Radon Water" at State Lab): A test which indicates the activity of radon gas, a naturally occurring radioactive gas which occurs at elevated levels in some Maine ground water.

Gross Alpha ("Test Gross Alpha" at State Lab): A test for radioactivity exclusive of that from radon. Usually indicates the presence of uranium or radium.

Semi-volatile Organic Screen ("Test SVO 525" at State Lab): A test for higher boiling point organic compounds which follows EPA method 525.1.

Herbicide Screen ("Test Chlorinated Acids" at State Lab): Will detect the presence of several widely used herbicides.

Carbamate Pesticides ("Test Carbam 531" at State Lab): Will detect the presence of several widely used pesticides including carbofuran, aldicarb, and carbaryl.

Pesticide Screen ("Test Pest CI Pcbs 508" at State Lab): Will detect the presence of selected chlorinated hydrocarbon pesticides and PCBs.

PFAS Screen: ("Test PFAS at accredited labs employing EPA methods, 533, 537 or 537.1 for use in potable water)

For a list of labs certified by the State of Maine, contact the Drinking Water Program at (207) 287-2070. To order bottles from the State Health Lab, call the PWS Inspector listed on the front page of this packet.

Water System Component Checklist & Questionnaire

The well approval procedure focuses primarily on the water source and the physical well itself. Compliance of the entire water system will be evaluated during a comprehensive inspection completed by the Drinking Water Program. Please check off the components that are, or will be, part of the water system. Include notes as needed.
