Chain pickerel	American eel
Minnows	
Golden shiner	

Physical Characteristics

Area - 380 acres	Temperatures
	Surface - 77° F
Maximum depth - 33 feet	33 feet - 50° F

Principal fisheries: Largemouth bass, smallmouth bass, white perch, chain pickerel

Sibley Pond provides an abundance and variety of habitat for warmwater fishes. This pond once supported a good fishery for smallmouth bass, but only a small population of smallmouths are now present. The preponderance of aquatic plant life makes this pond better suited for largemouth bass. Largemouths were introduced by Department biologists in 1970 and presently provide an attractive fishery.

White perch are numerous and anglers should find this delicious panfish enjoyable sport. The presence of black

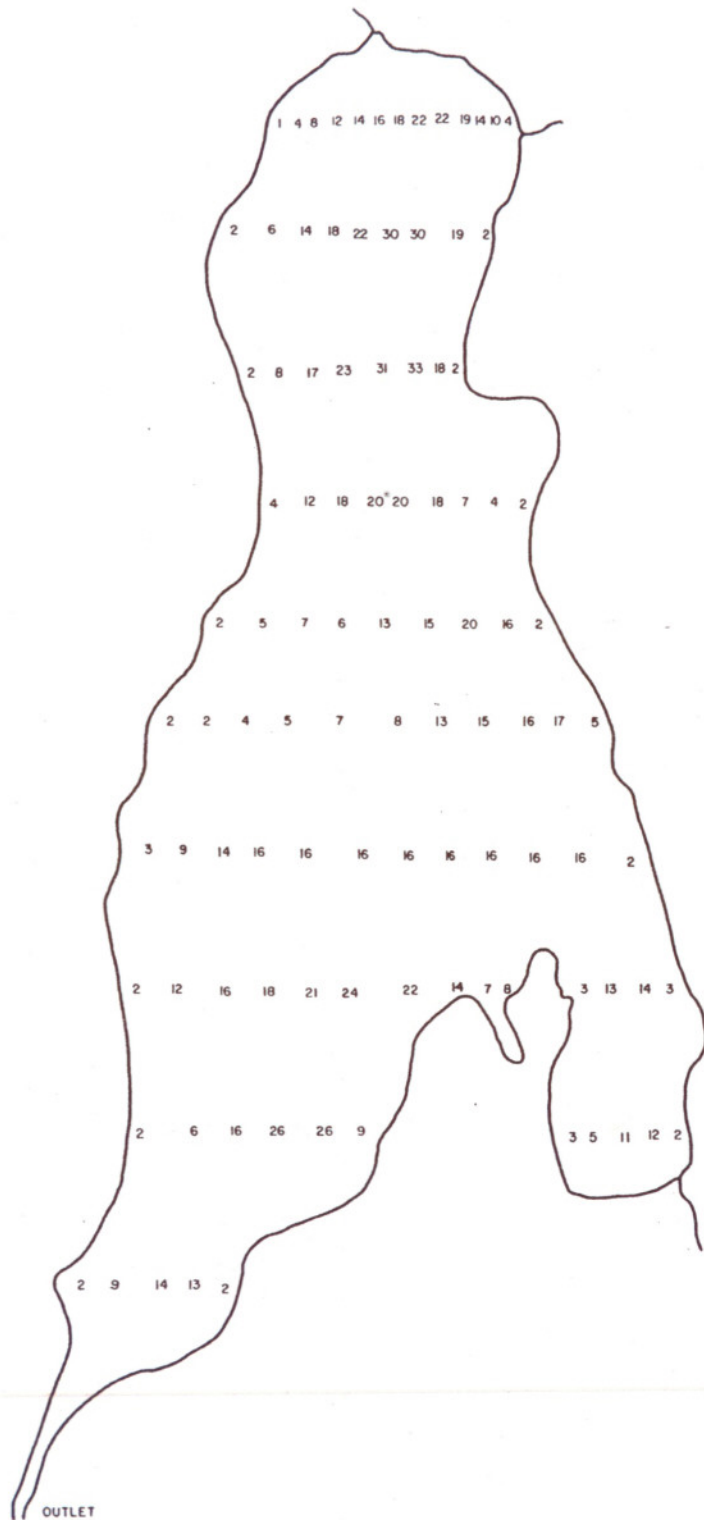

crappies have been confirmed, adding another dimension to Sibley Pond's diverse fisheries.

The public may access Sibley Pond by way of the old Route 2 roadbed.

Surveyed - August, 1960

(Revised- 1970, 1992) Maine Department of Inland Fisheries and Wildlife. Funded in part by Federal Aid in Fish Restoration Act under Federal Project F-28-P.
