

BOG LAKE

Marion Twp., Washington Co.
U.S.G.S. Long Lake, Me. (71/2')

to 13 inches, most fish average about 9 inches. Recent angler reports indicate that the trout fishing has declined due to increased competition from other species.

Fishes

Brook trout	Minnows
Yellow perch	Fallfish
	Pumpkinseed sunfish

Physical Characteristics

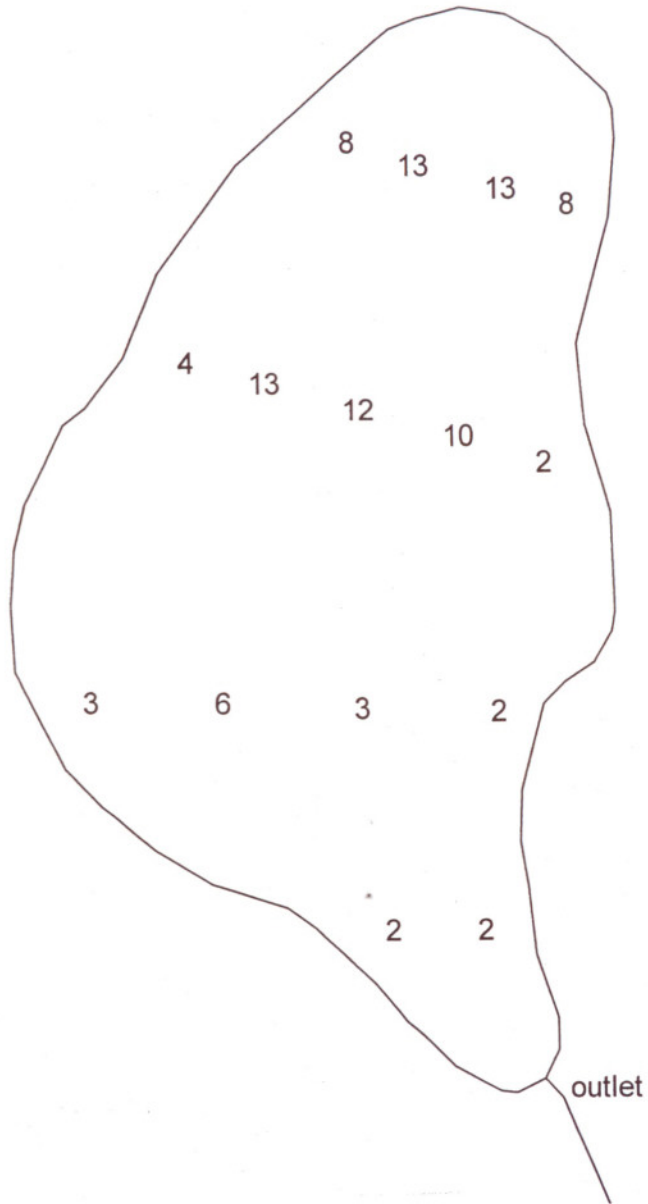

Area – 25 acres	Temperatures
	Surface – 75 F
Maximum depth – 13 feet	13 feet – 71 F

Principal fishery: Brook Trout

Bog Lake is a relatively, remote water situated several miles northwest of Rocky Lake in Whiting. Access is via the “Dodge Road” off Route 1 in Whiting. From Route 1 travel 6.9 miles, then take a left onto a four-wheel drive road, which takes you to the pond. Small boats/canoes can be slid into the water after a short carry.

The lake supports a modest population of wild brook trout, and a large population of small yellow perch. The trout population results from fish moving up the outlet, which connects with Rocky Lake Stream, a fair trout stream. Although anglers have caught trout up
