RE: Milestone® FIFRA Section 24(c) Special Local Need Label for Control of
Herbaceous Broadleaf Weeds and Woody Plants in Conifer Forest Site
Preparation Sites

Corteva Agriscience would like to request an extension to the Milestone® FIFRA
Section 24(c) Special Local Need Label referenced above which currently
expires on 31-Dec-2022.

The active ingredient contained within Milestone®, Aminopyralid, has been
undergoing registration review at US EPA, therefore Corteva has not proceeded
with adding this use to the Section 3 label. Once US EPA completes approval of
the revised labels that were submitted because of registration review, Corteva
will proceed with the appropriate regulatory action to add this use to the
Milestone® Section 3 label.

Milestone® continues to fill an unmet need in the use for control of herbaceous
broadleaf weeds and woody plants in conifer forest site preparation sites. A letter
of support has also been submitted by Ronald C. Lemin, Jr of Nutrien Solutions,
dated October 24, 2022 to further validate this unmet need, and the benefit that
the Milestone® product provides. Corteva hopes that the state of Maine will
continue to support Milestone® for this use by extending the current Section 24
Special Local Need.

If further information is needed, please contact Wes Marchione at 317-337-5513 (wes.marchione@corveva.com), Corveva Regulatory Leader for the State of Maine.

Sincerely,

A handwritten signature in black ink, appearing to read "Wes Marchione". The signature is written in a cursive style with a prominent initial "W".
